

BIT 4107 – Mobile Application Development

ENHANCED PROFESSIONAL STUDENT LOGBOOK

Student Name: _ Cecily Ado

Admission Number: _BIT/2024/73846

School/Faculty: _School of Computing and Informatics

Programme: __BIT

Academic Year: __2026

Semester: __Year 3 Sem 2

Lecturer: __Mr. Nyoro

Phone Number: _0758989285

Instructions

This logbook is used to document weekly learning activities, practical exercises, skills acquired, challenges encountered, solutions applied, and reflections. Students should complete all sections every week.

Each week to follow remarks in week 1 section.

Autogenerated Table of content

Week 1: Introduction to Mobile Application Development

Practical Activities Undertaken

only screenshots needed and labeling

Screenshots/Evidence Attached (Yes/No)

Tools/Software Used

Used Android studio- Kotlin for the assignment and Flutter for the project

Personal Reflection

Android Studio and Flutter work together in that the IDE provides the heavy duty debugging and SDK engine while Flutter handles the UI magic. Getting them to cooperate on my limited PC was a hectic, RAM freezing nightmare but it was worth it.

Week 2: Mobile Development Environment

Flutter plugin

Programming Language

Flutter

[Google](#) [Plugin homepage](#) ↗

Restart IDE

92.0.0

Overview

What's New

Reviews

Additional Info

Support for developing Flutter applications. Flutter gives developers an easy and productive way to build and deploy cross-platform, high-performance mobile apps for both Android and iOS. Installing this plugin will also install the Dart plugin.

For some tools, this plugin uses Chromium through JxBrowser to display content from the web. JxBrowser complies with LGPL and offers an option to replace Chromium with another component. To do this:

- Find the JxBrowser files stored in the [plugins directory](#), under `/flutter-intellij/jxbrowser`.
- The LGPL requirements are at [from JxBrowser](#), here you can also download the build script to relink with modified components.

Flutter setup

The screenshot shows the Flutter installation manual page at <https://docs.flutter.dev/install/manual>. The page title is "Install and set up Flutter". The instructions are as follows:

- 1 Download the Flutter SDK bundle**
Download the following installation bundle to get the latest stable release of the Flutter SDK.
flutter_windows_3.44.0-stable.zip
- 2 Create a folder to store the SDK**
Create or find a folder to store the extracted SDK in. Consider creating and using a directory at `%USERPROFILE%\develop` (`C:\Users\{username}\develop`).
Note
Select a location that doesn't have special characters or spaces in its path and doesn't require elevated privileges.
- 3 Extract the SDK**

A "Downloads" popup is visible in the top right corner, showing the file **flutter_windows_3.44.0-stable.zip** with an "Open file" button and a "See more" link. The left sidebar of the Flutter docs is also visible, with "Manage install" selected.

```
Command Prompt - flutter doctor
Microsoft Windows [Version 10.0.19045.5737]
(c) Microsoft Corporation. All rights reserved.

C:\Users\Lenovo>flutter doctor

Doctor summary (to see all details, run flutter doctor -v):
[✓] Flutter (Channel stable, 3.44.0, on Microsoft Windows [Version 10.0.19045.5737], locale en-US)
[✓] Windows Version (10 Pro 64-bit, 22H2, 2009)
[!] Android toolchain - develop for Android devices (Android SDK version 36.1.0)
    ✗ cmdline-tools component is missing.
      Try installing or updating Android Studio.
      Alternatively, download the tools from https://developer.android.com/studio#command-line-tools-only and make sure
      to set the ANDROID_HOME environment variable.
      See https://developer.android.com/studio/command-line for more details.
    ✗ Android license status unknown.
      Run `flutter doctor --android-licenses` to accept the SDK licenses.
      See https://flutter.dev/to/windows-android-setup for more details.
[✓] Chrome - develop for the web
[✓] Visual Studio - develop Windows apps (Visual Studio Community 2022 17.14.32)
    ✗ Visual Studio is missing necessary components. Please re-run the Visual Studio installer for the "Desktop
      development with C++" workload, and include these components:
        MSVC v142 - VS 2019 C++ x64/x86 build tools
        - If there are multiple build tool versions available, install the latest
        C++ CMake tools for Windows
        Windows 10 SDK
[✓] Connected device (3 available)
[✓] Network resources

SDK Platforms SDK Tools SDK Update Sites

Below are the available SDK developer tools. Once installed, the IDE will automatically check for updates. Check "show package details" to display available versions of an SDK Tool.

Name	Version	Status
☒ Android SDK Build-Tools		Installed
☐ NDK (Side by side)		Not Installed
☒ Android SDK Command-line Tools (latest)		Installed
☐ CMake		Not Installed
☐ Android Auto API Simulators	1	Not installed
☐ Android Auto Desktop Head Unit Emulator	2.0	Not installed
☒ Android Emulator	36.5.11	Installed
☒ Android Emulator hypervisor driver (installer)	2.2.0	Installed
☐ Android Project Templates	0.1.0	Not installed
☒ Android SDK Platform-Tools	37.0.0	Installed
☐ Android Support Repository	47.0.0	Not installed
☐ Google Play APK Expansion library	1	Not installed
☐ Google Play Instant Development SDK (Deprecated)	1.9.0	Not installed
☐ Google Play Licensing Library	1	Not installed

Tools used: Flutter, Android studio, Dart

Personal Reflection: Learned how user actions trigger events and how Flutter widgets respond to user input. Understanding navigation routes improved the app's usability.

Week 5: Data Management

Tools/Software Used: Firebase Firestore, Flutter, Android Studio

Personal Reflection: Gained experience storing and retrieving data from the cloud, making the application more dynamic.

Week 6: Networking and APIs

Add at least one uppercase letter

Flutter-Firebase firestore API

```
import 'package:cloud_firestore/cloud_firestore.dart';
```

```
class FirestoreService {
  final FirebaseFirestore _firestore =
    FirebaseFirestore.instance;
```

```
  Future<void> saveClothingItem(
    Map<String, dynamic> data,
  ) async {
    await _firestore
      .collection('wardrobe_items')
      .add(data);
  }
```

```
  Stream<QuerySnapshot> getClothingItems(
    String userId) {
    return _firestore
      .collection('wardrobe_items')
      .where('userId', isEqualTo: userId)
      .snapshots();
  }
```

```
  Future<void> deleteItem(String id) async {
    await _firestore
      .collection('wardrobe_items')
      .doc(id)
      .delete();
  }
}
```

Why Networking:

Networking is important because it allows the app to communicate with online services such as Firebase Authentication and Firestore. Through networking, users can create accounts, log in, store their preferences, and access their data from different devices. It also enables future features such as AI recommendations and cloud image storage. Without networking, the app would be limited to storing data only on the user's device.

Tools/Software Used: Firebase, Flutter, Android Studio

Personal Reflection: Learned how mobile applications communicate with backend services and how cloud databases improve accessibility.

Week 7: Application Architecture

Same as week 1

Week 8: Project Planning

Week 9: Device Features and Sensors

Same as week 1

Week 10: Notifications and Background Services

Same as week 1

Week 11: Mobile Security

Same as week 1

Week 12: Testing and Debugging

Same as week 1

Week 13: Application Deployment

Same as week 1

Week 14: Final Project Presentation

Same as week 1
